

PPE & TACTICAL GEAR

This stab and knife protection vest changes to the next generation to the high requirements of security service providers. The experiences gained by security personnel were directly involved in the development. The new stab proof vest is an indispensable companion against stabbing and cutting injuries by knives or other sharpened objects. Certainly, the vest also protects against kicks and punches particularly in vulnerable regions as the solar plexus. The primary stab protection provides 2 mm thick Aluminum plates in the abdomen and back spine area. 1.5 mm thick plastic plates protect the entire torso from stab and cutting injuries, these plates serve the secondary puncture protection. Despite the massive Aluminum plates, great attention was paid to make it lightweight.

The upper material of the vest has been completely reworked and is made of modern material 600D Cordura. The new upper material is very easy to clean and extremely resistant even under rough conditions. The Aluminum plates can be easily removed and inserted from the sewn-in pockets for cleaning and replacement.

Thanks to the special central zipper system, putting on and taking off has become even easier. The protective vest can be adjusted to individual measurements using elastic drawstrings and variable Velcro fasteners. Once the vest is adjusted to the user, this does not need to be repeated. The vest remains on the body during patrol trips in the service vehicle and can be worn as an over- or undervest. The protective vest is supplied with a matching carrying bag for easier transport to the deployment site.

Sizes	S-M, L-XL, 2XL-3XL
Colour	Black
Materials	Outer shell made of polyester fabric. 2mm thick aluminum panels 1.5mm thick plastic panels Hook & loop elastic strap YKK central zipper
Model	TVC-105
