

## PPE & TACTICAL GEAR

This flexible stab and knife protection vest changes to the next generation to the high requirements of security service providers. The experiences gained by security personnel were directly involved in the development. This vest provides the best protection against stabbing and cut injuries from knives or other sharpened objects. In addition, the vest also protects sensitive areas of the body against blows and kicks. This significantly minimizes the risk of injury.

The primary stab protection is protected with Dupont® anti stab and puncture resistance material with combination 0.8 mm thick stainless-steel plates in the abdomen and back area. The weight has been reduced to a minimum and can therefore be carried over a longer period with great flexibility. The protective vest can be adjusted to individual measurements using elastic drawstrings and variable Velcro fasteners. Once the vest is adjusted to the user, this does not need to be repeated. The vest is flexible enough to e.g., to remain on the body during patrol trips in the service vehicle and can be worn as an over- or undervest. Padding in the inner lining ensures optimal comfort and completes the features of this modern protective vest. On the protective vest itself there are many options in the back and chest area for attaching various equipment using the Velcro system or loops. The protective vest is supplied with a matching carrying bag for easier transport to the deployment site.

<b>Sizes</b>	S-M, L-XL, 2XL-3XL
<b>Colour</b>	Black
<b>Materials</b>	Outer shell made of nylon fabric. 0.8mm thick steel panels Anti stab and puncture resistance material by DuPont Adjustable straps Loop tape patches on front and backside for labeling
<b>Model#</b>	TVC-125
